

Title : Procedure and Obstenction of Slaughter Pig Farm Management
in Thailand.

By : Mr.Siri Kitthawee

Degree : Master of Business Administration

Chairman :

(Dr.Veera Pitarachat)

_____/_____/_____

To study this case for education want to know Procedure and Obstenction of Slaughter Pig Farm Management in Thailand. For worker, Sale, and money. I study from the owner and/or the manager of the farm then get all the result to apply for good effiency to manage every pig's farm.

By studying this case we can make a summary that all the country the owner and/or the manager of slaughter pig in little farm study from primary school to secondary school 77.65 percent and in the same way the middle and the large's farm they study in the primary school to secondary school 72.82 and 61.03 percent.

Almost of the owner and / or the manager of the slaughter pig farm in Thailand are male.

We can analyse how important of the farm in middle, north, South, north east and East side in Thailand.

Middle portion Small farm in middle side never use computer. They can produce the pig to the market once in 3-4 weeks approximately 92.308 percent.

We use computer in medium farm but not much. How to fix the price for slaughter pig is to make satisfied for both seller and buyer about 92.208 percent. For the bigger farm we do questionnaire and

found that 92.308 percent accept that although high assets but they still feed them, and the way they decrease assets is they use other raw material mixed in animal's food and use up to date equipment to produce animal's food by themselves and do hand mating about 84.415 percent.

North portion The owner and / or the manager of small farm has the same thought of the owner and / or the manager of middle farm in middle portion and the others are the same too.

South portion As doing questionnaire of the owner and/or the manager of the farm, we found that : - Management in small farm is the only one person for the owner and the employers are people in his family (Family's system)

In the south most of the employers about 6-15 workers work in middle farm. The owner and/or manager said Any how and any way about the assets they still feed the pig through.

For the bigger farm in the south most of the employers they come to work by themselves. The owner has supplement job too, example sell breeding stock pig and sell feeder pig too.

North East portion In the small farm we found that if we change the price for the feeder pig more than 5 baht/K.G. then the result is to increase the quantity of feeding pigs in the farm. The thought of the owner and/or manager is the same thought as in the middle portion. In the bigger farm, the thought of the manager in the North East is the same as in the south.

East portion We found that in the middle farm has the problem of the employers that they do not love their position.
