### Abstract

In this research, to study problem factors affecting administration of Dhamma division and to find solutions were two main objectives. The population included 257 administrator and teacher monks in Small Learning - Sites, Lamphun province. When the data were obtained, they were analyzed by percentage, means, standard deviation and frequency.

The results of the research revealed the opinions on the problems of four main administration jobs : academic, budget, personnel, and general affairs at a high level.

Problem factors affecting administration of Dhamma division in Small Learning - Sites were the lack of continuous teacher development process; disqualified teachers; shortage of professional human resources; low morale and motivation; limited budget allocation for educational management; and administrators' indifference of educational quality development.

Solutions to the problems could be focused on consistency of teacher development; provision of qualified teachers and budget for qualitatively educational administration; intensive attention from all the involved monks; management of knowledge and skill training for administrators' higher performance.
