Thesis Title : Construction and Evaluation in the efficiency of a Training Package on
the topic of "Fabrication of Pressure Vessel"
Major Field : Mechanical Technology
Thesis Advisors : Dr. Somyot Jedjaroenruk, Dr. Wichan Ketsingha,
Mr. Theerapong Viriyanon
Academic Year : 1999

Abstract

The objective of this thesis is to construct and evaluate the efficiency of a training package on the topic of "Fabrication of Pressure Vessel"

Research methods : The researcher use a training package with a sampling group to conduct the training program. The selected sampling group was the 25 officers who deal with fabrication of pressure vessel. The pre-test was once done before the training. After that, the training package was used to conduct the training. When the training was ended, post-test was again done. After that, the result was used in order to evaluate the training package efficiency. The training has been held for 2 days.

The result of evaluation shows that the training package has the effectiveness of 91.56/82.00 This value is higher than the standard of 80/80 which was previously set. The training package thus has higher effectiveness than the proposed criteria and can be used for training the officer who deal with fabrication of pressure vessel to develop their technical knowledge.
