Academic Year : 1999

Abstract

The purpose of this research is to construct and determine the efficiency of instructional package on NC Simulation for Curriculum of Higher Vocational Certificate, Department of Vocational Education, Ministry of Education. The researcher used the constructed instructional package to give test to the sampling group of twenty - five first year students in Production Technology division, Level of Higher Vocational Certificate of Chantaburi Technical College

The experimental process was done by using the pre - test to test their basic knowledge, and then taught them with instructional package. Later, they were assigned to do exercises. after finishing each lesson. The samples were tested again with the post - test. The scores acquired form the exercises and the tests were then used as data to analyze for the efficiency of this instructional package. The result is that the efficiency of the instructional package was 91.96 / 87.58 which was higher than the 80 / 80 established Criteria
