1	Introduction	6
1.1	Background and Significance	6
1.1.1	Fluids with internal inertia	6
1.1.2	Application of the group analysis method to integro-differential equations	7
1.1.3	Application of group analysis to ordinary differential equations	10
1.2	Objectives	14
1.2.1	Fluids with internal inertia	14
1.2.2	Applications of group analysis to integro-differential equations	15
1.2.3	Application of group analysis to ordinary differential equations	15
1.3	Scope of the Work	15
1.3.1	Overall scope and assumptions of the group classification of fluids with internal inertia	15
1.3.2	Applications of group analysis to integro-differential equations	16
1.3.3	Application of group analysis to ordinary differential equations	16
1.4	Outcomes of the research	16
2	Group classification of one-dimensional nonisentropic equations of fluids with internal inertia	18
2.1	Equivalence Lie group	18
2.2	Defining equations of the admitted Lie group	20
2.3	Case $k_2 \neq 0$	21
2.4	Results of the group classification	22
2.5	Appendix. Case $k_2 = 0$	24
2.5.1	$\dim(\text{Span}(V)) = 3$	25
2.5.2	$\dim(\text{Span}(V)) = 2$	25
2.5.3	$\dim(\text{Span}(V)) = 1$	32
2.5.4	$\dim(\text{Span}(V)) = 0$	47
3	Group analysis of evolutionary integro-differential equations describing nonlinear waves:	
	General model	52
3.1	Physical statement and main physical parameters	52
3.2	Admitted Lie group	55
3.2.1	One-dimensional case	56

3.2.2	Classification of subalgebras	59
3.2.3	Invariant solutions	59
3.2.4	Case $\alpha \neq 1$	61
3.3	Two-dimensional equation	63
3.4	3-dimensional case	64
3.5	Exponential kernel	65
3.6	Delay equation	67
3.7	Conclusion	67
4	On the equation for the power moment generating function of the Boltzmann equation. Group classification with respect to a source function	69
4.1	General Equations	69
4.2	Admitted Lie algebra of the equation for the generating function	71
4.3	Comparison with the results of the paper by T.F.Nonnenmacher	74
4.4	On equivalence transformations of the equation for the generating function	75
4.5	Group classification	76
5	On first integrals of second-order ordinary differential equations	79
5.1	Invariants of a class of second-order equations	79
5.2	General difficulties of the equivalence problem	81
5.3	Existence of the First Integral	81
5.3.1	Case $a_3 \neq 0$	83
5.4	Case $G = 0$	84
5.4.1	Case $a_3 \neq 0$	84
5.4.2	Case $a_3 = 0$	85
5.5	Examples	85
5.5.1	Time-independent case	87
5.5.2	Reduction	87
5.6	Conclusion	89
6	Complete group classification of systems of linear second-order ordinary differential equations with constant coefficients	91
6.1	Equivalence Lie group	91
6.2	Canonical forms	92
6.2.1	Case $J = J_1$	92
6.2.2	Case $J = J_2$	93
6.2.3	Case $J = J_3$	93
7	Summary	95
7.1	Fluids with internal inertia	95
7.2	Applications of group analysis to integro-differential equations	95
7.2.1	The Rudenko equation	95
7.2.2	The Boltzmann equation with sources	95
7.3	Application of group analysis to ordinary differential equations	96
7.3.1	On first integrals of second-order ordinary differential equations	96

7.3.2	Complete group classification of systems of two linear second-order ordinary differential equations with constant coefficients	96
7.4	Acknowledgements	96
