

ABSTRACT

The aimed of this descriptive study were to study general data of the respondences and situation of Tumbon Administrative Organisation(TAO.) duties performed regrading health promotion in responsible areas by main role of TAO. The data was collected from TAO. members and the government services those who working at TAO. office 21 TAO. from 41 districts consisted of 323 clients and using percentage, mean and standard deviation for the data analysis.

The result showed that most of the respondences were male(77.1%), the age between 22 - 51 years, married and more than one-third of them(38.0%) had primary school level of education. More than half of them have working experiences at TAO. for 1 - 4 years. Most of them know the TAO. 's main role with good level and duties performed following by that but for the health promotion side were in medium level only.

According to these results it is suggested that the health sectors in any level should give more and more understanding on main role of TAO. by emphasis on health that were most part of TAO. 's main role to TAO. members and TAO. officer to work well in this issues.
